Consider the applications

- Trade shows
- Space definition
- Room dividers
- Interior hanging signs
- Lobbies and office interiors
- Huge wall murals, single or multiple frames
- Retail, permanent or modular systems that hang one day and stand the next
- Permanent or portable for any applications

NOUVEAU

Nouveau Easily Updates Existing Displays!

With the economic environment what it is there is no need to hold off on updating that display environment!

Update or add-on to any existing extrusion or other display with Nouveau.

- ~ Self Standing
- ~ Hanging
- ~ Mounted

The stylish look of Nouveau aluminum extrusion frame is so basic and "clean", it complements any display. Existing extrusion displays by any manufacturer can be costly, some ad hoc choices "just don't fit". Nouveau blends into any display, the secret? More graphic, less frame. Nouveau complements your existing display and the various available feet make adding a few self standing displays of any size easy. Mount or hang your Nouveau frame, it's so lightweight that your installer will send you a thank you! Wire management becomes easy for professionals with Nouveau and single or double sided opaque or backlit graphics never looked so good! In fact you will have to ask yourself if the image is fabric or hard panel. Taut fabric graphics ship in an envelope one day and are hanging up the size of a wall the next. Install quickly and efficiently, change out messages every day of the show.

It's simple
LESS FRAME MORE GRAPHIC

Parts & Pieces

Nouveau frame parts are as simple as they are elegant. Create huge frames that accept large seamless graphics. Combine multiple frames and mount, hang or stand using the optional feet or available round base. Designers and I&D love the Nouveau system.

What is an SEG graphic?

SEG stands for Silicone Edged Graphics. With SEG, fabric graphics are finished with a silicone welting sewn to the back perimeter edge of the fabric. Unlike round beaded finishing options SEG is a flat silicone welting. This edge is then inserted into a groove on the perimeter of the frame to create a taut, flat display.

Diagram of Frame and SEG:
