

Fabric Graphic Installation for Aero Structures

IMPORTANT!

Assemble frame per Aero Overhead setup instructions before installing graphic

Hanging Structures come in many shapes and sizes requiring some adjustment to these instructions

1. With CLEAN HANDS, unfold your fabric graphic on a clean surface. Place the graphic along the interior space of the frame (fig. 1).
2. If there are eyebolts on the frame, align them with the eyebolt holes in the graphic (fig. 2). Some graphics have spaces between the zippers for the eyebolt hardware.
3. Grasping the paired sides of a zipper firmly, bring the front and back of the unzipped graphic up and over the structure (fig. 3). Stretch the fabric so the zipper meets together (fig. 4).
4. Start the zipper and zip a 10" to 15" section. Work the graphic neatly around the structure (fig. 5).
5. Repeat Steps 3 and 4 for the remaining sections, adjusting the fabric as necessary (fig. 6).
6. When repacking the graphic, remember to WASH YOUR HANDS before folding the graphic and placing it in the plastic bag.
